

# Lab #1

(due date: 9/24/2015)

1. **This program tests the concepts of:**  
HTML 5 basics

2. **Objective:**  
Create the following pages

- a) yum.html - An HTML5 document containing an ordered list of three items—ice cream, soft serve, and frozen yogurt. Each ordered list should contain a nested, unordered list of your favorite flavors. Provide three flavors in each unordered list. On the top of the page before the ordered list starts include a picture of a ice cream (I recommend using Google Image Search). The picture should be stored in your web home and referenced in the image tag as a internal source.
- b) fsttbl.html – An HTML5 document that renders exactly as below.

- c) index.html – Edit this page to include links to yum.html and fsttbl.html. These should be internal links. Also include a link to your favorite website.
